

# General Bulletin for Saturday, May 27, 2017

**Unless updated, this bulletin expires at 12:00 midnight Monday, May 29, 2017**

A General Bulletin is in effect for Tuckerman Ravine. You will need to do your own snow stability assessments. A new bulletin will be issued when conditions warrant or within 72 hours. We are no longer monitoring conditions in Huntington Ravine.

As high pressure builds over New England on Saturday, skies should clear as the day progresses. An inversion may keep clouds over mid-elevations with a slight chance of precipitation, but this should be limited to the morning. Sunday will see clearer skies overall with temperatures reaching close to the 50sF. A system arriving Sunday night will likely bring rain on Memorial Day.

**The summer Lion Head Trail is now open** and is the preferred route to the Summit from Pinkham Notch. **A section of the Tuckerman Ravine Trail in the Bowl is closed to all use.** This section is from Lunch Rocks to the junction of the Alpine Garden Trail and is due to the severe consequences of a fall in this area. Only this section is closed. Hiking or skiing in the vicinity of the closed trail, including the Lip, is not permitted. **ATTENTION AUX RANDONNEURS!** Une section du sentier du Tuckerman Ravine est présentement fermé à toutes les activités. Cette section est située entre Lunch Rocks et le sommet du Headwall jusqu'où ce dernier rejoint le sentier du Alpine Garden. Cette fermeture inclut également toute activité de descente dans le secteur du Lip. Seulement cette section du sentier est fermé. Cette fermeture annuelle est due à l'ampleur des crevasses et à la gravité qu'occasionnerait une chute dans ce secteur.

Please be aware that while the Lion Head Summer Trail is open, snow will be encountered on the route. Appropriate equipment should be carried. The following typical mountain hazards are also in play:

- **UNDERMINED SNOW:** Meltwater running under the snow creates hollow spaces potentially bridged by thin snow that can easily break under the weight of a person. With the 1.5" of rain that fell over the past 48 hours, snow will be hollower than it appears. In places, this might mean a wet foot or a minor fall, while larger holes with significant flowing water can be of much greater consequence. Listen for flowing water and look for small holes in the snow surface.
- **CREVASSES (GLIDE CRACKS), WATERFALL HOLES, AND MOATS:** Many of the largest, deepest cracks continue to grow, particularly in Lip and Center Bowl. Give these plenty of space. A fall into one could be fatal. Moats around rocks are widespread through the terrain. While the cracks in the Lip and Center Bowl are obvious and should ward all away, pay close attention to the smaller cracks forming now in the Sluice and Chute. While maybe not as deep, these can cause trouble if taken lightly when compared to the more obvious hazard in the Headwall.
- **LONG SLIDING FALLS:** While the calendar may say Memorial Day, there is ample snow coverage on a multitude of slopes. Long, sliding falls can turn ugly this time of year as the snow coverage no longer extends into the runout zones. Crashing into a boulder at high speed while have dire consequences. Use appropriate equipment for your chosen route of travel. In places, this includes microspikes, crampons, and your ice axe.

The Sherburne Ski Trail is closed. Please hike down the Tuckerman Ravine Trail to Pinkham Notch.

## **Please Remember:**

- Safe travel in avalanche terrain requires training and experience. This bulletin is just one tool to help you make your own decisions in avalanche terrain. You control your own risk by choosing where, when, and how you travel.
- For more information contact the Forest Service Snow Rangers, the AMC at the Pinkham Notch Visitor Center, or the caretakers at Hermit Lake Shelters.
- **Posted 7:00 am Saturday, May 27, 2017. A new bulletin will be issued when conditions warrant.**
